

A Converged answers, replayed as static layouts (one per run)

B Live controllers, 400 s window, graded on the last 60 s

D3: victims canneal, npb_cg_d80, npb_ep_e; donors npb_mg_d300, llama. Dots = runs, bar = mean. Panels are not comparable: live arms are graded after llama's phase change, replays before it (ledger §20b). npb_cg_d80 is bistable at 4-5 ways (± 10 pp, §18b): CATCh, SpiderSense and dCat cost values there are ranges, not points. PaLLOC run 2 was still reallocating inside the graded tail (§12h).
